Breadcrumb

Indicate the current page's location within a navigational hierarchy that automatically adds separators via CSS.

Example

Home

[Home](#) / Library

[Home](#) / [Library](#) / Data

[Copy](#)

```

<nav aria-label="breadcrumb">
  <ol class="breadcrumb">
    <li class="breadcrumb-item active" aria-current="page">Home</li>
  </ol>
</nav>

<nav aria-label="breadcrumb">
  <ol class="breadcrumb">
    <li class="breadcrumb-item"><a href="#">Home</a></li>
    <li class="breadcrumb-item active" aria-current="page">Library</li>
  </ol>
</nav>

<nav aria-label="breadcrumb">
  <ol class="breadcrumb">
    <li class="breadcrumb-item"><a href="#">Home</a></li>
    <li class="breadcrumb-item"><a href="#">Library</a></li>
    <li class="breadcrumb-item active" aria-current="page">Data</li>
  </ol>
</nav>

```

Changing the separator

Separators are automatically added in CSS through [::before](#) and [content](#). They can be changed by changing `$breadcrumb-divider`. The [quote](#) function is needed to generate the quotes around a string, so if you want `>` as separator, you can use this:

```
$breadcrumb-divider: quote(">");
```

[Copy](#)

It's also possible to use a **base64 embedded SVG icon**:

```
$breadcrumb-divider:
```

```
url(  
HROPSI4IiBoZWlnaHQ9IjgiPjxwYXRoIGQ9Ik0yLjUgMEwxIDEuNSAzLjUgNCxIDYuNSAyLjUgOGw0LTQtNC00  
eiIgZmlsbD0iY3VycmVudENvbG9yIi8+PC9zdmc+);
```

Copy

The separator can be removed by setting `$breadcrumb-divider` to `none`:

```
$breadcrumb-divider: none;
```

Copy

Accessibility

Since breadcrumbs provide a navigation, it's a good idea to add a meaningful label such as `aria-label="breadcrumb"` to describe the type of navigation provided in the `<nav>` element, as well as applying an `aria-current="page"` to the last item of the set to indicate that it represents the current page.

For more information, see the [ARIA Authoring Practices Guide breadcrumb pattern](#).
