About

Overflow

View on GitHub

Use these shorthand utilities for quickly configuring how content overflows an element.

Barebones `overflow` functionality is provided for two values by default, and they are not responsive.

This is an example of using `.overflow-auto` on an element with set width and height dimensions. By design

This is an example of using `.overflow-hidden` on an element with set width and height dimensions.

Copy

```
<div class="overflow-auto">...</div>
<div class="overflow-hidden">...</div>
```

Using Sass variables, you may customize the overflow utilities by changing the `$overflows` variable in `_variables.scss`.
